

Vico del Gargano (FG)

"L'ACCADEMIA DEGLI ECCITATI 2.0: "the urban art turns the LIGHTS on ecology" is a project that wants to enhance the library "Giuseppe del Viscio" through a series of installations of URBAN ART. The project aims to show and revive the deep passion and the history of the Accademia degli Eccitati Viciensi. During the 18th century the Accademia pushed the consciousness and the awareness of the local people and at this point Vico became the only Enlightenment center of Gargano which we have documented sources. The deep meaning of ECCITATI (literally thrilled but with the meaning of to wake up) had the purpose to stimulate the senses and the mind of the people to get off from obscurantism and dogmatism. This became the first action for a contemporary intervention that could be able to switch on the "lights" on topical issues related to ecology.

Oceans & Forest

ARTIST:
ALESSANDRO SUZZI - GODS IN LOVE

The oceans, populated by fantastic fish, morays and eels that melt and mix in the water.

The forests, inhabited by birds, deers, wild boars and powerful animals.

In the middle, man, with his hands, too often stepmothers, always eager to manipulate the natural spaces, the genetics of flora and fauna, the world of the wild.

With his feet, ready to kick, to step on places that don't belong to him. With his eyes, to capture and scrutinize worlds that he should instead protect. The work is a reflection on the human impact on forests and oceans investigated through the rightful inhabitants of these fragile spaces.

Oceans

"Plastic is the element that nature did not want to create and everything comes back at some point."
[Nicolò Carnimeo]

+ 1.178.000 t
of plastic in the Mediterranean sea

RECYCLING

what to do?
<< >>

- 107.000 ha
of forest areas per year due to fires

REFOREST
URBAN GARDENS
